- dynamic multimedia display and PowerPoint® native –
- without a central server and without proprietary application –
- standalone box without internet connection –

VEGA is a simple and economical digital signage solution. Each VEGA box, connected to a screen and your network, allows you to view PowerPoint® slide shows, photos, videos, or PDFs remotely from your computer.

Several screens ? no problem. Each VEGA box automatically forms a network that you can supervise through your only Internet browser.

VEGA modules are autonomous. They have no additional cost of installation or subscription. The overall cost of a VEGA solution is the single purchase cost of one module per screen. This approach makes it the most cost-effective digital signage solution on the market.
